Rewarding Career...

Ultrasound has revolutionized the field of medicine. It offers a unique opportunity in the diagnosis, evaluation, and treatment of disease without the use of surgery, injection of dyes, or radiation. It has grown rapidly in the last twenty years and is expected to continue to grow well into the twenty first century. Evaluation of the market and survey of employers indicate the strong demand and shortage of well-trained sonographers.

Sonography (ultrasound) is one of the fastest-growing areas in diagnostic medicine. It is a noninvasive, non-toxic diagnostic medical examination in which high frequency sound waves are used to produce images of many different areas of the human body. Ultrasound is readily used to image the heart, abdominal organs, the developing fetus, male and female reproductive organs, as well as blood flow throughout the body. You name it, ultrasound can see it!

Educating the Next Generation...

Our program is up to the challenge, providing you with the skills and education you will need to become a **sonographer** that manages and leads in this important and growing convergence of medicine and technology. Sonographers are committed to providing one-on-one care to a wide variety of patients as well as providing the best possible diagnostic examination. Sonographers use the latest in biomedical technology to diagnose and treat a wide variety of diseases.

Post Graduation, Imagine the Possibilities...

The demand is very high for sonographers throughout the United States and abroad. It has been shown that the demand will continue to increase well into the future. As the demand grows for competent sonographers, so will the salaries. The attractive salaries and flexible work hours, as well as the diversity of options available and the lack of geographical limitations on employment opportunities, make ultrasound an attractive career field.
